                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Four types of regulatory chains are found: I-alpha, I-beta, II-alpha, and II-beta. Their expression varies among tissues and is in some cases constitutive and in others inducible.

Type I regulatory chains contain a high-affinity binding site for Mg-AFP.

The pseudophosphorylation site binds to the substrate-binding region of the catalytic chain but is not phosphorylated. The physiological significance of phosphorylations by other kinases is unclear.

TION **superfamily cAMP-dependent protein kinase regulatory chain; cAMP receptor protein cyclic nucleotide-binding domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            homology acetylated amino end; ATP binding; cAMP binding; duplication; heterotetramer; homodimer; phosphotransferase

Mean 16.093; Variance 49.915; scale 0.322 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

The immunogenergan is 184pp; English.

The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivative of gpl00 (see R84855). The melanoma its derivatives (see R84200-R84311) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state

(melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Page 22-24; 40pp; English.

Immunogenic peptides derived from the melanoma associated antigen may be used in the production of vaccines. Nucleotide sequences encoding the immunogenic peptides may be used as primers and probes in the detection of melanoma cells. Tumour infiltrating lymphocytes capable of binding to the melanoma associated antigen can be cultured ax vivo and returned to melanoma particles, and when radiolabelled, they may be used to identify tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Claim 81, Fig 7A: 194pp; English.

Spl00 is a melanocyte-melanoma-specific antigen (MART-1) which is recognized by T-lymphocytes, and is a derivative of the melanoma-specific antigen convaise. The converse of the immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, especially vaccines, for the treatment or prevention (by immunisation) of melanoma. Antibodies against cDNA2 and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The Melanoma-specific immunogen comprises epitope(s) homologous with pMel.17 - are highly potent stimulators of HLA-A2+CTL's useful in adoptive immuno-therapy.

Example 8; Page 51; 148pp; English.

A melanoma-specific immunogen homologous with pMel-17 comprises one con more CTL (cytotoxic T lymphocyte) epitopes from the group R82098-CR R82194 capable of eliciting a CTL response. The epitopes R82098-CR R82108 are of particular interest. The immunogen can be used for partial protection in mammals against melanoma peptides which are partial protection in mammals against melanoma peptides which are
                                                                                                                                                                                     Claim 81; Fig 5A, 184pp. English.

CDNAZ is a melanoma antigen (MART-1) which is recognized by
T-lymphocytes, and is a derivative of the melanocyte-melanoma-
pspecific antigen gp100 (see R84855). Antigen cDNAZ5 is a source
of immunogenic peptides (see R84199) which are optionally modified
(see R84200-R84211) to enhance their binding to a MHC molecule and
used in medicaments, especially vaccines, for the treatment or
prevention (by immunisation) of melanoma. Antibodies against cDNAZ
and its immunogenic peptides may be used in the detection and
isolation of the antigen from a sample, the detection of which is
sequence 661 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25-MAR-1996 (first entry)
Melanoma specific mutant immunogen epitope 9mer peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Method for expression and isolation of mammalian phospholipase G-gamma-1 useful for determining inhibitory activity of test compounds towards phospho: inositide-specific phospholipase-C enzyme. Claim 1: Column 13-20; 25pp; English.
Rat phosphoinositide-specific phospholipase C-gamma-1 (EC-3.1.4.3) (R9058) is obtd. by expression in a transformed bacterial host of CDNA (T12292) encoding rat PLC-gamma-1 and DNA coding for an epitope tag (Glu-Glu-phe) which is incorporated at the C-terminus of the recombinant PLC-gamma-1 is used to assay the inhibitory activity of
expression prods., or mutation(s)
Claim 44; Page 31; 51pp; English.
Cells transformed with the wild-type DCC gene can be used as model
systems to study cancer remission and drug therapy. DCC polypeptide
expression prods. may be used to reverse the neoplastic state.
X1615 represent an amino acid illegible in the specification, all
other Xs are encoded by stop codons.
                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA having genetic information of urea amide lyase - prepd. by culturing Candida utilis

This sequence represents a protein having urea amide lyase (URL) activity and is encoded by a DNA sequence which was isolated from a yeast belonging to the Candida genus. The DNA encoding this sequence maybe used in a recombinant plasmid to transform a microorganism, and URL may be isolated from the culture medium. This method allows production of URL of high purity. The URL prepared gives a high sensitivity in urea determination.

Multimeric forms of inter-cellular adhesion mol. (ICAM) -
displaying enhanced binding of human rhinovirus and able to
reduce its infectivity
reduce its infectivity
Fig 1; Page 37; 70pp; English
Oligonucleotides Q55327-35 were used to create forms of
ICAM-1 (R48038) that facilitate cross-linking and
multimerization. The primers given in Q55336-39 were used to clone
ICAM(185)/AgG immunoadhesin fusion protein. ICA(453)/IgG fusion
(R48037) in encoded by sequence Q55340. Mutein Q55342, a mutated
form of Q55340, encodes tICAM(452) cysteine mutant terminated at
residue 452.
                                                                                                                                                                                                                                                                                                                             Gaps
                                                                        Human soluble inter-cellular adhesion molecule-1 - which inhibits lymphocyte function associated with LFA-1 and ICAM-1 interaction claim 2; Fig 1; 16pp; English function associated with antigen sICAM can inhibit lymphocyte function associated with antigen LFA-1 and ICAM-1 interaction, useful in treating inflamation, graft rejection, and for LFA-1 expressing tumour cells. Gan also inhibit infection by rhinovius and Coxaackie A virus, increase cell adhesion and reverse immune dysfunction due to excess sICAM-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                          Changing peptide reactivity via conjugation with a second peptide causes change in conformation of first peptide, pref. LFA-1 and ICAM-1 functional domain derived peptide(s)
Claim 14; Page 38-40; 64p; English.
Functional domains derived from LFA-1 alpha subunit CDIIa (R80107), LFA-1 beta subunit CDI8 (R80107) and ICAM-1 CD43 (R80110) are used as the basis of short, synthetic peptides (R80109, R80110) are used modulate ICAM/LFA binding interaction. CDI8 is obtd. from human Sequence 531 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 44; DB 15; Length 531;

DI (VON ARNIM U.)

PHALMEGOUTICAL for treatment or inflammatory or immunological diseases - contg. heparins, heparinoids, proteoglycans and/or prostavash in the protein contains a signal peptide sequence (a.a. 1-25). The protein contains a transmembrane domain (a.a. 481-503).

There is an RGD-11ke sequence (a.a. 152-154). The protein is N-linked glycosylated at 7 sites (a.a. 130-132, 183-185, 202-204, 207-269, 207-269, 385-387, 406-408). Based on known immunoglobulin related contains of the immunoglobulin related sequences, the ICAM protein can be divided into 5 domains (a.a. 53-137, 140-213), 337-416 and 424-502). These domains have significant similarity complers of the immunoglobulins. The mature protein is a transmembrane contain which binds activated T lymphocytes. Diseases of the system are inflammatory and/or immunoglobulins. The mature protein is a transmembrane confinematory and/or immunoglobulins. The mature protein is a transmembrane protein which binds activated T lymphocytes. Diseases of the system account of the immunoglobulins of lymphocytes to cells expressing ICAM diseases. Multiple sclerosis patients have been shown to encode a complement of search anticoagulant factors to treat the above mentioned diseases.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. BIOL. CHEM. 269:12932-12939(1994).

-! FUNCTION: MAJOR AIRWAY GLYCOPROTEIN.
-! TISSUE SPECIFICITY: TRACHEDBRONCHIAL MUCOSAE (NOT SOLELY).
-! SUBGELLULAR LOCATION: SECRETED.
-! SUBULIT: MULTIMERIC.
-! SIMILARITY: CONTAINS MUCINS.
-! SIMILARITY: CONTAINS A VWFC DOMAIN.
-! SIMILARITY: CONTAINS A C-TERMINAL CYSTINE KNOT-LIKE DOMAIN (CTCK).

CANCER RES. 54:3007-3010(1994).

CANCER RES. 54:3007-3010(1994).

1 - FUNCTION: IMPLICATED AS A TUMOR SUPPRESSOR GENE.

1 - SUBCELLULAR LOCATION: TYPE I MEMBRANE PROFIEIN.

1 - TISSUE SPECIFICITY: FOUND IN AXONS OF THE CENTRAL AND PERIPHERAL NEWOODS SYSTEM AND IN DIFFERENTIATED CELL TYPES OF THE INTESTINE.

2 - SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. CONTAINS FOUR CZ-LIKE DOMAINS.

2 - ID SEBASE: COLORECTAL TUMORS THAT LOST THEIR CAPACITY TO DIFFERENTIATE INTO MUCUS PRODUCING CELLS UNIFORMLY LACK DCC EXPRESSION. INACTIVATION OF DCC DUE TO ALLELIC DELELIC DELETION AND/OR POLINT MUTATIONS MAY CAUSE BOTH LYMPHATIC AND HEMATOGENOUS METASTASIS OF DESOPHAGEAL SQUAMOUS CELL CARCINOMAS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            POTENTIAL.

CC C. I EUNCTION: CATALYTIC PART OF CAK WHICH ACTIVATES CYCLIN-ASSOCIATED CDC2/CDK2/CDK4 BY THROUGHOUT THE CELL CYCLE.

CC C. I ENZYME REGULATION: PHOSPHORYLATION. ITS EXPRESSION AND ACTIVITY ARE CONSTRAT THROGHOUT THE CELL CYCLE.

CC I ENZYMATIC ACTIVITY (BY SIMILARITY).

CC I SUBBUNT: PROBABLY ASSOCIATES WITH CYCLIN H AND MATI TO FORM A MULTIMERIC ACTIVE ENZYME (BY SIMILARITY).

CC I SUBCLILLAR LOCATION: UBLOUTOUS.

CC I SUBCLILLAR LOCATION: UBLOUTOUS.

CC I SUBCLILLAR THE CONSERVED CATALYTIC DOMAINS OF TYR-PROTEIN KINASES: BELCOGS TO THE CDC2/CDC28 SUBFAMILY.

CC KINASES BELCOGS TO THE CDC2/CDC28 SUBFAMILY.

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivative of gp100 (see R84855). The peptide and its derivative of gp100 (see R84855). The melanoma its derivatives (see R84200-R84211) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state

( melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encoding the immunogenic peptides may be used as primers and probes in the detection of melanoma cells. PM encoding melanoma antigens recognised by T-lymphocytes - also recording melanoma antigens is used to detect, treat and immunise animal against melanoma.

Claim 81; Fig 7A: 184pp; English.

Claim 81; Fig 7A: 184pp; English.

Gloin 81; Fig 7A: 184pp; English.

Claim 81; Fig 7A: 194ppic Complexed and is a derivative of the melanocyte-melanoma -specific antigen CDNA25 (see R84854). gpl00 is a source of immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, especially vaccines, for the treatment or prevention (by immunogenic peptides may be used in the detection and isolation of melanoma asample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 8; Page 51; 146pp; English.

A melanoma specific immunogen homologous with pMel-17 comprises one or more CTL (cytotoxic T lymphocyte) epitopes from the group R82098-882194 capable of eliciting a CTL response. The epitopes R82098-R82108 are of particular interest. The immunogen can be used for partial protection in mammals against melanoma peptides which are homologous with pMel-17 are highly potent stimulators of HIA-A2+CTLs in several cell lines and can be used in immunotherapy or
                                                                                                                                                                                                                                                                                                                                               Claim 81, Fig 54, 184pp. English.

CDNAZ is a melanoma antigen (MART-1) which is recognized by
T-lymphocytes, and is a derivative of the melanocyte-melanoma-
specific antigen gpi00 (see R84855). Antigen cDNAZ5 is a source
of immunogenic peptides (see R84199) which are optionally modified
(see R8420-R84211) to enhance their binding to a MHC molecule and
used in medicaments, especially vaccines, for the treatment or
prevention (by immunisation) of melanoma. Antibodies against cDNAZ
and its immunogenic peptides may be used in the detection and
isolation of the antigen from a sample, the detection of which is
indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-AUG-1995.

DNA encoding Helicobacter pylori CagB and CagC antigenic polypeptide(s) - useful for diagnosing H. pylori infection and to polypeptide(s) - useful for diagnosing H. pylori infection and to indicate predisposition to peptic ulceration or gastric cancer. Claim 10; Page 59-62; 74pp; English.

The sequence represents the H. pylori CagC antigenic polypeptide. CagC is transcribed with the CagB antigen (see R95003) as a single transcribed with the CagB antigen sing antibodies, or detection of the DNA using specific probes or primers, can be used to diagnose H. pylori infection and to indicate predisposition to peptic ulcers or gastric carcinoma. The proteins and their fragments may be used in vaccines. Mutant H. pylori deficient in CagB (ATCC 55611) or CagC (ATCC 55612) are attenuated because continuate synthesis of interleukin-8 in epithelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NA coding delta-(L-alpha-amino-adipyl) L-cystinyl D-valine synthase - for improved productivity of cephalosporin antibiotics claim 1; Page 14-27; 69p; Japanese.
The sequence (Q48231) is of a vector which includes the delta-(L-alpha-aminoadipyl)-L-cystinyl-D-valine synthase gene.
This sequence was transformed into a host cell to express the ACVS product. The protein produced (R40227) was then used to manufacture Sequence 3639 AA;
                                                                                                                           16-JUL-1996 (first entry)
CagC antigenic polypeptide.

Disclosure; Page 19; 56pp; English.
The amino acid sequence codes for delta- (L-alpha-aminoadipyl)-L-cysteinyl-D-valine synthetase (ACVS). The prods. may be used for the enhanced expression (in vivo and in vitro) of mutant enzymes and fermentable or known and new beta- lactam antibiotics and their precursors, partic. antibiotics of the penam and cephem classes. homology have been identified, domains I, II and III. Within these domains several even more conserved elements can be distinguished. Since the enzyme synthesises a tripeptide, which most probably requires the activation of three amino acids, a role for these domains in the activation reactions seems likely. A fourth domain is thought to act as a thioesterase. The gene can be used to express the synthetase enzyme which can be used for the produ. Of new beta-lactam antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    M EP-444758-A.

The lactam antibiotic cpds.

Claim 1; Page 20; 54pp; English.

Chesc agenered using the Sequences system 2.0. The protein described in EP-35719. Cosmid HM193 contains one such fragment which was sequenced using the Sequences system 2.0. The protein sequence was deduced from the DNA. Three distinct regions of homology have been identified, domains 1, II and III. Within sequence was deduced from the DNA. Three distinct regions of three domains several even more conserved elements can be distinguished. Since the enzyme synthesises a tripeptide, which most probably requires the activation of three amino acids, a fourth domain is thought to act as a thioesterase.

The gene can be used to express the synthetase enzyme which can see also bloom the prodn of new beta-lactam antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (KONN ) GIST-BROCADES NV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gene coding for eicosa-penta:enoic acid synthetase - is isolated from Pseudomonas, Alteromonas or Shewanella and used for recombinant prodn. of eicosa-penta:enoic acid claim 8; Page 71-77; 106pp; Japanese.
EPA is useful as a drug, having anticoagulant, hypolipemic, hypodiycemic, antihypertensive and anticancer activity. It is also a pesticide and is useful as a nutritional foodstuff and animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-MAY-1994 (first entry)
Enzyme involved in eloosapentaenoic acid (EPA) synthesis.
EPA: eloosapentaenoic acid synthetase; drug; anticoagulant;
hypolipemic; hypoglycemic; antihypertensive; anticancer; pesticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene region mutation for use as vaccine.
Disclosure, Fig 3; 24pp; English.
The 28K gene does not have an essential function in the replication of the virus and mutations can be introduced into this region. The virus may also have a mutation in the 28K gene region. The virus can be used to prepare vaccines for protection of pigs against pathogens. The protein is, to a low degree, homologous to the Us2 protein of HSV-1.
See aslo R11418.
Sequence 256 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mutant pseudo-rabies virus for pigs - has protein kinase or 28 K
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Example 9; Pages 293-307; 661pp; English.

Bouble stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV

C infected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV CDNA library. Clones were rescued from the lambda phage, searched against a sequence database and found to be unique HGBV sequences. The clones were then used to sasemble the sequences T00129/30 (GB contig A and B) which encode the proteins R94345-7 (the 3 possible coding strand reading frames) and R82072, respectively. Reagents which comprise the HGBV C INA, or its protein prods. can be used for the diagnosis, therapy cor in a vaccine to prevent HGBV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
